

Indigenous and local communities small-scale fisheries: local stewardship for the implementation of the 2030 biodiversity conservation agenda

Come and listen to the main caretakers of the sea!

ABOUT

What are the concerns of small-scale fishers that the post 2020 agenda should consider? How can we support small-scale fishers' rights and leadership in marine conservation? What does equity and inclusion mean for our oceans?

A panel of small-scale fishers from every continent will share their **call to action** and discuss how a human rights-based approach to conservation in the Global Biodiversity Framework is vital for people and the planet.
